PROFILE

Motivated and dedicated Electronics and Telecommunication Engineering (ENTC) graduate seeking an entry-level position to utilize theoretical knowledge and practical skills in a dynamic and challenging environment. Eager to contribute to innovative projects while continuously enhancing expertise in the field.

PROJECT'S

1] Auto Electricity Cutoff & People count.

The "Auto electricity cutoff & People count" project aims to promote energy efficiency and optimize space utilization through the integration of automated systems for electricity management and occupancy monitoring. These two systems could potentially be integrated to work together seamlessly. It is a perfect combination of Hardware & Software project.

2] Web Page For UI/UX Developer.

A web page for a UI/UX developer should effectively showcase the developer's skills, experience, and portfolio while providing a seamless and visually appealing user experience. The web page is optimized for various devices and screen sizes across desktops, tablets, and smartphones. Employ visually appealing design elements, color schemes, typography, and imagery that reflect the developer's design sensibilities and attention.
